The sequence was deduced from an isolated cDNA clone (see AAT76919). The sequence was deduced crowstation should not affect the activity of CCRS. The susceptibility of human macrophages to HIV infection depends on cell surface expression of CD4 and CCRS. CCRS is a member of the 7-transmembrane superfamily of G-protein coupled cell surface molecules. It plays an essential role in the membrane fusion step of infection by some CRS provides. The metablishment of stable, non-human cell lines and transgenic mammals having cells that coexpress human CD4 and CCRS provides valuable tools for research of HIV infection.

CRS provides that bind to CCRS, CCRS variants, and CCRS-binding agents capable of blocking membrane fusion between HIV and target cells represent potential anti-HIV therapeutics for macrophage tropic strains of HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          288 TOGGAGCCCTGCCAAAAAACAATGTGAAGCAAATGGCAGCCGGCCCCTGCCTCGGCTC 347

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is human CC (Cys-Cys) chemokine receptor 5 (CCR5), which is stimulated by MIP-1 alpha, MIP-1 beta or RANTES chemokines, but not by moncyte chemoattractant protein 1 (MCP-1), MCP-3, MCP-3, interleukin e [II-9] or growth related gene product alpha (GRO alpha) chemokines. Active CCR-5 is also a receptor of human immunodeficlency virus type 1 or type 2 (HIV-1 or HIV-2). CCR5 or its cDNA can used to diagnose, treat and/or prevent inflammatory diseases, e.g. rheumatoid arthritis, asthma, idiopathic pulmonary fibrosis and psoriasis, viral infections, especially HIV-1 or HIV-2 infection, cancer, atherosclerosis and autoimmune disorders.
                                 Human Cys-Cys chemokine receptor 5; CCR5; human immunodeficiency virus; type 1; type 2; HIV-1; HIV-2; diagnosis; treatment; prevention; inflammatory disease; rheumatofid arthritis; glomerulonephritis; asthma; idiopathic pulmonary fibrosis; psoriasis; viral infection; cancer; atherosclerosis; autoimmune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Active and inactive forms of human CC chemokine receptor CCR-5 useful to diagnose, prevent and/or treat inflammatory disorders, autoimmune disease and viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         352

The sequence was deduced from an isolated CDNA clone (see AAT76220). An Ala127Leu variant (see W128340 of CCR5 was also identified. The susceptibility of human macrophages to HIV infection depends on cell surface expression of CD4 and CCR5. CCR5 is a member of the 7-transmembrane superfamily of G-protein coupled cell surface molecules. It plays an essential role in the membrane fusion step of infection by some HIV isolates. The establishment of stable, non-human cell lines and transgenic mammals having cells that coexpress human CD4 and CCR5 provides valuable tools for research of HIV infection.

Antibodies that bind to CCR5, CCR5 variants, and CCR5-binding agents capable of blocking membrane fusion between HIV and target cells represent potential anti-HIV therapeutics for macrophage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          - used to inhibit membrane

                                  serves as a correceptor for infection by macrophage tropic (M-tropic) strains of HIV-1. The invention relates to the identification of a CCR5 variant (see AAW88231), designated CCR5m303, comprising the first two transmembrane domains of wild-type CCR5, but lacking transmembrane domains 3-7. The presence of the CCR5m303 variant with the wild type CCR5 allele shows a positive correlation with resistance to infection with M-tropic HIV-1
                                                                                                                                                                                                                                                                              /note- "corresponds to TGT (Cys) in wild-type CCR5, TGA (Stop) in CCr5m303"

strains, and may indicate slower progression of the disease. The detection of CCR5 variants may be used to identify individuals at lower risk of infection relative to the general population who, if infected, may exhibit slower progression to AIDS. Probes and primers (see AAV84127-36) are provided for use in diagnostic methods for detecting the presence of such variants. A method is provided for inhibiting HIV-1 infection a cell expressing the CCR5 receptor. This involves introducing a nucleic acid encoding a CCR5 variant into the cell, thereby reducing the number of functional CCR5 molecules present on the cell surface.

(A) are used for the diagnosis of tumors (especially colorectal or prostatic), organ rejection, inflammation and autoimmune diseases. Also inhibitors of (I) are used therapeutically against tumors (and their metastases), inflammation (particularly bronchial asthma or chronic bowel inflammation), or autoimmune diseases (theumatiod arthritis or lupus), where the (cardio)vascular, lymphatic, respiratory, nervous, digestive, endocrine, motor or urogenital systems or skin are affected, and bone marrow diseases. The products of the invention are chemokine derivatives

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of human HIV-1 co-receptor CCR5.

Amino acids 2-18 in the N-terminal region of CCR5 comprise an HIV-1 pg120-pg120-bindings site that determines the specificity of the pg120-bindings site that determines the specificity of the interaction between CCR5 and HIV-1 gp120. Post-translational sulfation of the tyrosine residues in the CCR5 N-terminus is required for gp120 binding and may critically modulate the cusceptibility of target cells to HIV-1 infection in vivo. The invention provides claimed sulfated peptides (see AAB8247) that are based on the CCR5 N-terminal region and which are effective of inhibiting HIV-1 binding to CCR5. These peptides are used in claimed methods of inhibiting HIV infection of CD4+ cells, of preventing CD4+ cells from becoming infected with HIV, and of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               translocation of HIV into transformed mammalian cell or for identifying a human chemokine receptor that facilitates the infection of a particular HIV strain into the transformed mammalian cell. Compounds identified can be used to treat cellular dysfunction and to prevent or combat HIV infection. The present sequence is a human chemokine receptor (CRR), CC-CRR-5 related protein. CC-CRR-5 is the principal cofactor for entry mediated by the envelope giycoproteins of primary macrophage-tropic
                                           The present invention relates to a transformed mammalian cell that contains a gene encoding CD4, a construct encoding a reporter gene under the regulation of an human immuno deficiency virus (HTV) long terminal repeat (LTR) and that has been transduced with a vector encoding a human chemokine receptor (CKR) where the CD4 and the CKR are present on the cell surface of transformed mammalian cell. The invention is useful for identifying drugs or antibodies that interfere with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mammalian cell (I) that contains a CD4 gene, reporter gene for identification of drugs and antibodies for treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of a polypeptide encoded by the human chemokine (C-C motif) receptor 5 (CCR5) gene of the invention (see Chemokine (C-C motif) receptor 5 (CCR5) gene of the invention (see CR5 ABA97318). The specification describes haploryping the CCR5 applotypes or haplotype pairs fully defined in the specification. CCR5 haplotypes or haplotype pairs fully defined in the specification are describes an isolated polymolectide comprishing a nucleotide sequence which is a polymorphic variant of the reference CCR5 gene sequence and comprises an isogene defined by a haplotype described in the specification and its encoded polypeptide. The methods of the invention are useful to diagnose and develop treatment for diseases associated with abnormal expression or function of the gene. The CCR5 isogenes and the screened compounds are useful for treating human immunodeficiency syndrome (AIDS). The invention has antiviral applications. The specification describes genotyping the CCR5 gene of an individual; predicting an association between a trait and a haplotype or composition comprising a genotyping oligonucleotide for detecting a CCR5 composition comprising a genotyping oligonucleotide for detecting a CCR5

                                                                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for identifying a binding compound for CC chemokine receptor 5 (CCR5). The method involves screening a library of test molecules (particularly peptides) with immobilised CCR5, and then identifying those molecules which bind. The invention also relates to CCR5-binding molecules which bind. The invention also relates to CCR5-binding molecules identified using the method of the invention, methods for identifying consensus motifis for CCR5-binding peptides, a transfer vector encoding tagged CCR5, a computer-aided methods for determining the relative binding affinity of a test molecule to CCR5 and a computer aided drug screening assay that utilises the three-dimensional structure of CCR5. Compounds identified using the methods of the invention are useful for treating or preventing HIV (human immunodefliciency virus) infection or AIDS (acquired cimmunodefliciency syndrome) in a patient. The methods of the invention may also be used to identify agonists or antagonists of the interaction of CCR5 with its natural ligand, and to determine a binding motif for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides isolated nucleic acid sequences that encode rabbit prostaglandin (EG) E2EP3 receptor, human PG E2EP2 receptor, human chemokine receptor CCR-5, human ss2 adrenergic receptor, human chemokine receptor CCR-5, human ss2 adrenergic receptor, rat renal outer medullary potassium ion channel protein or human small G-protein rho, cogether with deduced protein sequences. Also provided is a method for the production of eukaryotic proteins by culturing bacteria transformed with vectors contraining the above nucleic acid sequence on a nucleic acid (1) that comprising at least three positively charged amino acids, or a sequence comprising at least three positively charged amino acids, or a sequence comprising at least three positively charged amino acids, or a sequence combinant production of eukaryotic proteins, particularly membrane of, and in frame with, (ii) a sequence encoding a protein. (I) are used for recombinant production of eukaryotic proteins, particularly membrane proteins, G-protein coupled receptors or ion-channel proteins, in diagnostic and screening assays and as studies; as therapeutic agents; in diagnostic and screening assays and can immunohistochemical markers, e.g. for orphan receptors or ion channels. Antibodies raised against the chemokine receptors or ion channels. Antibodies raised against the chemokine receptor CCR-5 can be used (when administered as antiserum or generated in vivo) to prevent entry of human immune defliciency virus (HIV) into cells.

                                                  The invention relates to G protein-coupled receptors (GPCRs) for which the endogenous ligand has been identified. Non-endogenous constitutively activated versaions of known GPCRs are used in the invention for the direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists. Such associated with GPCRs. The present sequence is a non-endogenous version of a known human GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 use in

The method involves screening a library of test molecules (particularly peptides) with immobilised CR5, and then identifying those molecules which bind. The invention also relates to CCR5-binding molecules which bind. The invention also creates to CCR5-binding molecules identified using the method of the invention, methods for identifying consensus motifs for CCR5-binding peptides, a transfer vector encoding tagged CCR5, a computer-aided pethods for determining the relative binding assay that utilises the computer aided drug screening assay that utilises the three-dimensional structure of CCR5. Compounds identified using the chaman immunodeficiency virus) infection or AIDS (acquired immunodeficiency syndrome) in a patient. The methods of the invention of immunodeficiency syndrome) in a patient. The methods of the interaction of CCR5. The present sequence represents a naturally occurring variant of human CCR5. The present sequence represents a naturally occurring variant of human cCR5 in which there is a glutamine, rather than a leucine, at

The present sequence is human G-protein chemokine receptor (CCR5) HDGNR10 protein. CCR5 HDGNR10 antibodies are useful for treating, preventing cor ameliorating a disease or disorder associated with inflammation, defective or aberrant chemotaxis of immune cells, HIV infection (such as pneumocystis carini) pneumonia or Kaposi's sarcoma) or defective or aberrant T-cell antigen presenting cell interaction. The disease or disorder may also be an infection a cytomegalovirus infection such as an early stage HIV infection, a cytomegalovirus infection, or a poxvirus infection, an autoimmune disease (e.g. rheumatoid arthritis) or a pervirus infection, an autoimmune disease (e.g. rheumatoid arthritis) or a neurodegenerative disorder. The disease or disorder may be associated with aberrant CCR5 expression, lack of CCR5 function, aberrant CCR5 ingend expression, lack of CCR5 ingend function. CCR5 HDGNR10 protein classed as a food additive or preservative to increase or decrease storage capabilities. CCR5 HDGNR10 DNA are useful for chromosome diagnosis, treatment and prevention of cancer (breast, ovari, aberrant control protein, and provention of cancer (breast, ovari, aberrant control protein, and prevention of cancer (breast, ovari, aberrant control protein, and provention of cancer (breast, ovary, adrenal protein) and by a marrow casterial protein, and the marrow casterial protein and the protein casterial protein and the prevention of cancer (breast, ovary, addrenal protein) and the protein casterial protein and the protein casterial protein and the protein casterial protein are also useful in the casterial protein and the protein casterial protein are protein and the protein and the protein and the protein are also useful in the casterial protein and the protein are also casterial protein and the protein are also casterial protein and the protein and th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gland, bone, bone marrow, gastrointestinal tract, liver, lung, urogenital); immune disorders (Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative collitis); cardiovascular disorders (myocardial ischaemias) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human immunodeficiency virus; antimicrobial; vasodilator; vulnerary; cytostatic; immunosuppressive; nootropic; neuroprotective; gene therapy; eurordegenerative disorder; Raposi's sarcoma; autoimmune disease; rheumatoid arthritis; concer; breast; ovary; adrenal gland; bone marrow; gastrointestinal tract; lung; liver; immune disorder; Addison's disease; menitiple sclerosis; ulcerative colitis; diabetes mellitus; allergy; multiple sclerosis; ulcerative colitis; crohn's disease; wound healing; cardiovascular disorder; myocardial ischaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chemokine receptor; CCR5; HDGNR10; inflammation; HIV;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated nucleic acid encoding a human G-protein chemokine receptor (CCR5) HDGNR10 polypeptide, useful for preventing or treating autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gastrointestinal tract, liver, lung,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
